

Medical Pathology

The institute is responsible for all internal medicine services. Clinical immunology is of particular interest (autoimmune diseases), both as regards the treatment of kidney diseases and systemic diseases.

It is a center of excellence in the field of nephrology.

It has specific expertise in endocrinology and includes a lab.

It treats:

- Congenital kidney diseases.
- Acute and chronic kidney failures.
- Acute and chronic nephrites, hematuria and proteinuria.

It has specific expertise in endocrinology

Primary and secondary prevention of risk factors.

On high-risk patients, a strict clinical control is performed with proper therapeutic protocols.

Endocrinology lab with endocrine-metabolic pathophysiology (both laboratory and outpatient unit).

- Treatment of viral hepatitis.
- Crohn's disease (chronic inflammatory disease of the digestive tract).
- Prevention programmes on chronic kidney diseases.

Research

Clinical research on the kidney. Prevention programmes.

(Agreement with the Mario Negri Institute in Bergamo).

Hypocholesterolemia medications (drugs which lower cholesterol levels).

The team managed by Professor Andre Satta participated in the ESPLANADE study, started in 2003 by the Mario Negri Institute of Pharmacological Research, in collaboration with the Italian Group of epidemiological studies in nephrology (GISEN), involving 21 hospitals throughout Italy.

Outpatient activity

Internal Medicine, Hepatology, Gastroenterology, Digestive Endoscopy, Nephrology, Endocrine-Metabolic Pathophysiology, Immunology.

The patient may visit the clinic even without a prescription. A prescription will be released for a follow-up examination.
